Dear Recruiter,

I am writing to apply for the summer intern position as a software engineer. I am a sophomore student at Bellevue College and working to achieve my degree in Computer Science. My college, self-learning, and motivation to succeed have prepared me to be a good fit for your company. After completing courses in the fundamentals of CS I and II, and Data structures, GPA in my major is 4.0. During that time, I've gained a working knowledge of Java and C++, a good understanding of object-oriented design, as well as improved my analytical and problem-solving skills.

Before summer 2020, I will have also learned Programming languages, Computer Architecture I, Software Engineering, and Algorithms. My self-learning mostly is around web technologies such as HTML, CSS, JavaScript, React.js, Angular2+, NodeJS, and MongoDB. I have several web projects in my portfolio. You can find them on my portfolio website - veronikadmytryk.net. Additionally, I like helping my classmates and working in teams. Collaborations and sharing our knowledge are crucial for becoming good software engineers. I attend tech talks to make sure I fully understand the theories and techniques I will use in my future career.

My current area of interest is the conversational API where I am exploring the capabilities of personal assistants in automating my daily routine tasks. Using Google Dialogflow API and Firebase Functions I am working on a project to keep track of my dog's feeding schedule through conversational experience.

As I prepare for a career in computer science, I am dedicated to gaining practical experience to complement my coursework and offer a much broader learning experience. I would be thrilled to learn more alongside your team of engineers.

Thank you for your time and consideration. I look forward to hearing from you soon.

Sincerely,

Veronika Dmytryk
